Summary:

Software engineer with experience as a front-end developer, specialized in Java-Script development, HTML, PHP and CSS. I am a self-driven Engineer passionate about problem-solving and user centric design. I am excited to be part of a company that offers a collaborative and productive work environment where I can grow and contribute with my experience as an Engineer.

Education:

B.S. in Computer Science

California State University, Dominguez Hills Carson, CA

May 2016

Extended Program Bootcamp

University of California San Diego, San Diego, CA

December 2019

Work Experience:

Assistant Website Developer and Systems Administration Apprentice

Conveyor Group, Imperial, CA

Jan 2025 - Apr 2026

Situation: Worked on legacy and non-responsive websites that had significant accessibility issues. These sites were under tight deadlines, and many compliance problems were time-consuming to identify and fix. I also had to learn accessibility concepts while working on real projects.

Task: Responsible for performing accessibility audits, identifying WCAG-related issues, and implementing fixes to improve usability and compliance across multiple websites within strict timelines.

Action:

- Ran automated accessibility tests using Pa11y and WAVE to identify WCAG compliance issues across PHP, Statamic CMS, and Laravel websites.
- Prioritized and resolved front-end accessibility issues directly in code (HTML, CSS, JavaScript), ensuring fixes were efficient and scalable.
- Committed and pushed code updates through GitHub, maintaining version control and deployment consistency.
- Addressed content-related accessibility issues within the Statamic Control Panel, including labels, headings, and structure.
- Carefully performed content updates directly in production environments, ensuring accuracy and avoiding disruptions to live websites.
- Researched complex accessibility issues to determine appropriate remediation strategies and apply effective fixes.

Result: Successfully resolved accessibility issues across multiple websites, improving overall usability and bringing most sites closer to WCAG compliance despite tight deadlines and working with older, non-responsive codebases.

Associate Software Engineer
IPS-Clinic Source, San Diego, CA
Jul 2022 - Dec 2023

Situation: The development team was facing a significant backlog of front-end tasks, which was delaying project timelines and impacting overall productivity. This backlog needed to be cleared to ensure the timely release of new features and maintenance updates.

Task: I was assigned to address and resolve the backlog, which included various front-end tasks such as fixing broken HTML documents, work on customized EHR documents, and optimizing performance for existing applications built with HTML, CSS, and JavaScript.

Action:

- Prioritized and organized the backlog into manageable tasks, collaborating closely with the customer Success Lead to establish realistic deadlines.
- Implemented efficient solutions to resolve UI issues and bugs, improving the user experience across multiple devices.
- Participate in agile development processes, including sprint planning and daily stand-ups.
- Research, verified, and documented software defects for management and the development team to review.

Result: Successfully cleared the backlog ahead of schedule, resulting in the timely completion of all work. This significantly improved team productivity and enabled future new cases to be on-time releases. As a result of my performance, I was given the opportunity to start training with the back-end team, expanding my technical skill set.

Technical Skills:

- **Programming Languages:**
 - HTML
 - CSS (tailwindcss)
 - JavaScript (ES6, React, [Node.js](#), AlpineJS)
 - SQL (MYSQL, T-SQL)
 - Wordpress + Bricks
 - Statamic cms, laravel, php, composer
 - Git/GitHub
 - Responsive websites
 - Web hosting
- **Software:**
 - Jira Work Management Salesforce
 - Microsoft SQL
 - Visual Studio Code
 - Microsoft Office
 - Microsoft 365 business.
 - Forklift file transfer software
 - Web accessibility standards
 - DNS records

Projects:

stadium-clicky-game:

scope: The Clicky game is a web game application where users click images of different soccer stadiums in the world to score points. The only catch is that the images randomly move in their location with every click. If you click the same image twice you lose.
